

Invertible DeepONet (Q64): forward pass, design $a \rightarrow$ ERP

Branch: design $\rightarrow$ coefficients $b = T(a)$, $T = \text{RealNVP}$ (bijection)

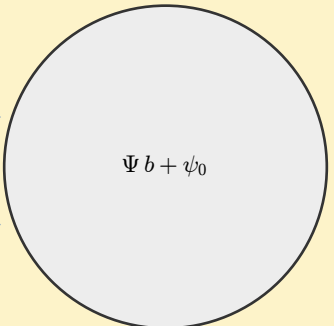

Trunk: frequency $\rightarrow$ basis functions $\Psi(f)$ (does not see the design)

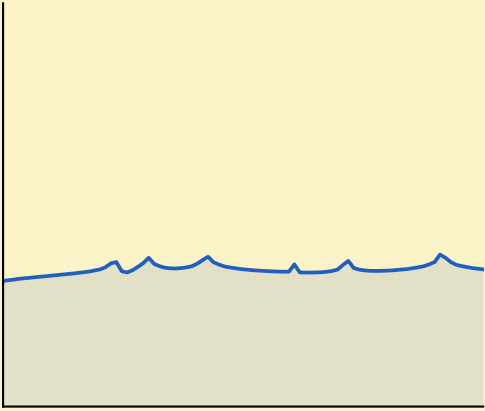

Combine (linear in b)

$$\text{ERP}(f) = \sum_q b_q \psi_q(f) + \psi_0(f)$$

$q = 1 \dots 64$, f on the 301-point grid

ERP:
301 points

10-160 Hz
